Claims 1-7, 9-11 and 13-17 are pending in this application.

Response to Arguments

Applicant's arguments with respect to claims 1-7, 9-11 and 13-17 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7, 9-11 and 13-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Merck Manual Section 16, Chapter 202, Coronary Artery Disease.

Art Unit: 1614

The claims are drawn to compositions comprising a beta-blocker and a platelet inhibitor, methods of use for cardiovascular disease and a method of making such compositions.

The Merck Manual (page 14 of the enclosed) recites that aspirin reduces mortality and reinfarction rates in post-myocardial (MI) patient's 15% to 30%. Timolol, propranolol or metoprolol reduces post-MI mortality by about 25% for ≥ 7 years. High-risk patients should be treated.

It does not teach that these compositions are to be administered together in a single dosage unit.

It is prima facie obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose. *In re Kerkhoven* 205 USPQ 1069. The idea for combining said compositions flows logically from their having been individually taught in the prior art. *In re Crockett* 126 USPQ 186, 188. See also *In re Shannon* 148 USPQ 504 (one step laminate is obvious from two step laminate). Regarding the method of making the composition (claims 16 and 17), the method of preparing a tablet is well known in the art. Nothing unexpected has been shown in the method of preparing a tablet that consists essentially of a beta-adrenergic blocker and aspirin.

Thus the claims fail to patentably distinguish over the state of the art as represented by the cited references.

No claims are allowed.
